## Supply & Demand Chain Executive *Predictive Analytics Webinar* to Feature Voxware

*Learn from leading experts about the power of analytics across the supply chain and gain real-world insights from Keith Phillips as to how Voxware customers are leveraging analytics to drive greater productivity and accuracy*

**Hamilton, NJ, September 26, 2018** – [Voxware](#), a leading provider of cloud-based voice and analytic supply chain solutions, announced today that it will sponsor and participate in the [Predictive Analytics II](#) live webinar hosted by Supply & Demand Chain Executive, the only magazine and website covering the entire end-to-end global supply chain in every vertical. The one-hour webinar is scheduled for October 24, 2018 at 1:00pm ET and will feature Keith Phillips, President and CEO of Voxware.

Joining Phillips will be an expert panel offering insights into how organizations can leverage Predictive analytics, combined with Prescriptive analytics, to collect powerful supply chain management information and make better informed critical decisions.

“Customers that deploy our analytics consistently tell us they see an additional 10-15 percent increase in productivity and accuracy on top of the other double-digit gains realized by using voice,” said Phillips. “Our analytics software, [VoxPilot](#), is able to collect data from any system in the supply chain that has data relating to the delivery of a product to the end customer. That data can be used to better manage the activities within the distribution center to drive productivity and accuracy to an even higher level.”

[VoxPilot](#) is a complete analytics solution offering Descriptive, Diagnostic, Predictive and Prescriptive analytics. It provides visibility and insights into Voxware Voice Management Suite (VMS) data, internal supply chain information, such as Transportation Management Systems and Order Management Systems and external information, including sources like weather and traffic information. By aggregating and analyzing all of the data, VoxPilot presents real-time and past distribution center activity, predicts future events and helps organizations navigate the right course of action to immediately remedy problems that may arise.

Voxware automates all aspects of the supply chain through its multimodal VMS solution. The flexibility of a multimodal solution allows workers to use the best tools for the task and individual. Once an organization has fully automated a worker with technology and they are performing at the highest level of proficiency that they can get from a voice, scanning or augmented reality solution, then the only thing to do to make workers more productive is to manage the environment using data.

“One of the benefits we’re seeing by automating all of the functional areas within the distribution center and leveraging the analytics is not only an increase in productivity, but a significant increase in accuracy,” said Phillips. “I’m looking forward to the upcoming Supply & Demand

Chain Executive webinar and sharing real examples and information with attendees about how analytics are driving performance increases throughout the supply chain.”

There is no cost obligation to register for the Supply & Demand Chain Executive Predictive Analytics webinar. To signup, please click [here](#).

### **About Voxware**

Voxware offers technology solutions that deliver essential supply chain information exactly when and where it's needed, optimizing the speed, accuracy and efficiency of distribution operations. Its product suite includes both [warehouse automation](#) and [analytics](#) solutions uniquely focused on distribution functions. With these solutions, companies reach an unprecedented understanding of how best to manage their operations, improving profitability by reducing costs and exceeding customer expectations.
