

Voxware VoxConnect®

Make integrating voice and WMS fast and fluid.

Agility, speed and flexibility have never been more critical for distribution centers – not just across the operations, but also deep within your WMS and voice solutions. Integrating them could be an unending problem, unless VoxConnect is part of your voice deployment toolset.

VoxConnect makes the union of Voxware® VMS® and your WMS (the current one, or any future one) a streamlined experience. Now and for years to come.

Join the movement to loosely coupled interfaces.

Connect without coding and reap the benefits.

The VoxConnect graphical toolset serves as a bridge between your Voxware® VMS solution and existing IT systems – enabling them to easily interact with one another while protecting their integrity. The results are rewarding:

- **Speedier solution deployment.** Interfaces are quickly mapped, without the need for coding.
- **No “deadly embrace.”** The WMS and voice applications are loosely coupled, so each one can be changed independently of the other.
- **Operational flexibility.** Implement a new WMS without modifying your voice applications. Tailor Voxware VMS and update workflows without modifying the WMS code.

3 easy steps are all it takes.

- **Map.** Using a graphical interface, create maps that connect the data in the WMS to your Voxware VMS solution. VoxConnect ensures that the WMS drives the business process.
- **Transform.** When needed, a VoxConnect transformer can convert WMS data into a format optimized for Voxware VMS, and back again.
- **Transport.** Make data exchange easy to set up. VoxConnect supports a wide variety of transport protocols to electronically transmit assignments, tasks, and results between technologies.

Realize the immediate advantages of code-free integration. You'll thank yourself later.

As you evaluate voice solutions, consider this: Are you headed for a complex WMS integration riddled with roadblocks? Will creating interfaces mean endless and costly coding? If you change the WMS later, will you have to modify the voice system? Or vice versa?

Avoid these problems with Voxware! VoxConnect makes interfacing your WMS with Voxware VMS swift, streamlined and economical. Without compromising on flexibility.

Better results in less time at a lower cost. Eliminate the need for costly embedded code to tie your voice solution to the WMS. VoxConnect creates loosely coupled interfaces that exchange information at the data and message level, not at the code level.

Seamless compatibility. The innovative capabilities of VoxConnect help ensure that your Voxware VMS solution integrates quickly and seamlessly with the WMS and IT systems you already have in place, speeding the time to deployment.

Easy integration of future releases. Deploy future releases of systems without the need for major re-work to the integration. With Voxware, you can count on virtually every voice business process to be configured, not coded.

Rapid adaptation to business changes. You're free to make changes to both your WMS and your voice solution, independently, in response to shifts in the supply chain, customer demands and technology.

"We saw Voxware's software as a way to gain cost benefits without having to undertake an expensive WMS upgrade. Integration between Voxware and our WMS was quickly accomplished, and in the end we realized cost savings that have given us money to invest in other areas."
