

Voxware VoxTempo™

Eliminate voice training and get workers productive in minutes.

For organizations adding full-time employees or working with agencies to staff temporary workers, training becomes paramount. It's imperative to have the new workers onboarded and up-to-speed as quickly as possible.

With VoxTempo, Voxware's Natural Language Voice Recognition (NLVR) engine, training time can be completed in minutes, so new workers can strap on a headset and immediately begin issuing commands which the system will recognize, register and provide a response.

Optimize warehouse worker productivity through shortened dialogue and rapid onboarding.

Easy On-Boarding – An intuitive app helps workers complete a rapid training process, so they are familiarized quickly with the system and ready to work.

Address Surge/Seasonal Hiring with Ease – Temporary employees can get started immediately without individual training allowing the system to register their unique voice fingerprint.

Superior Accuracy – VoxTempo outperforms traditional speaker dependent or independent models typically used in industrial environments.

Dozens of Languages Supported – VoxTempo supports more than 30 languages, allowing workers to speak in the language with which they are most proficient.

“With VoxTempo, we were able to get our employees productively working the very first day on the job. I believe that everyone wants to be productive, and VoxTempo enables our workers to do that instantly.”

Jacob Smith, General Manager of Frontier Distributing
