99.99% Accuracy and Efficiency

25 YEARS Turning Complex Warehouses Into High Performance Operations

For more than 25 years we've focused on one thing: helping distribution and fulfillment teams pick, pack, and ship with greater accuracy and efficiency. Our voice directed technology is purpose-built for the warehouse.

What Sets Us Apart

1. Proven Voice Expertise

Our deep (+25 years) experience in voice-enabled warehouse workflows means that our technology and our team offer a greater level of insight and richer functionality than generalized WMS or system integration vendors. Our warehouse optimization consultants have over 20 years' experience. Heck, even our support team has on average over 10 years of relevant experience and tenure.

2. We Work Like You Do

Your operation is unique, and your voice solution should reflect that. Whether you are domestic or international in scale, we can support you with 24/7 support. Whether your WMS is on-premise or in the cloud, Voxware can support you with real-time socket interfaces or Restful API's. Voxware let's you add voice to your WMS while giving you real time visibility and optimization capabilities. We're the solution partner of choice when companies know what they want and aren't willing to settle.

3. Relationship Oriented

We measure success in terms of delivering great customer outcomes and ROI. That means we offer honest expert counsel, frank conversations, multimodal solutions that deliver real efficiency and accuracy improvements, transparent pricing, proactive & responsive support, and notably - our optimization consultants remain engaged for the life of the relationship, not just during the implementation. We form relationships for the long haul as evidenced by our long-standing client relationships and our many client testimonials.

- **Third Party Logistics**

"By implementing Voxware, we've been able to improve our accuracy to 99.9%"

Mark Smith
President and CEO Frontier Distributing

"Their reputation, their products stood out and stood above what we saw from the rest of the voice picking solutions—ease of integration, ease of configuration, and also ease of use and training."

Mike F. VP of Global Distribution & Technology Thibault
